INSTALLATION and MAINTENANCE INSTRUCTIONS SM28 GEAR DRIVE ELECTRIC CABLE REELS

All units are provided with right hand rotation unless otherwise specified. This means that cable is pulled off spool top left or bottom right (spool rotates clockwise to wind cable) **when viewing spring end of reel**. See diagram on parts page.

Clock-type springs provide power for automatic cable takeup. **Spring must be pretensioned at time of installation** to ensure that tension is applied to cable at all times. A tension adjustment ratchet wrench is provided with each reel.

WARNING

Do not attempt to relieve spring tension using spanner wrench. Doing so may result in personal injury.

INSTALLATION

- Ensure that machinery to be serviced by reel is at position closest to reel.
- 2. Securely mount reel in desired position using 1/2"(M12) bolts. Be sure spool is aligned with cable run.
- 3. Position optional cable guide, if reel is so equipped. See CABLE INSTALLATION DRAWING
- Connect free end of cable to junction box on machine or adjust cable stop so that desired length of cable extends from reel.
- Remove ratchet wrench and cover plate on spring housing to expose shaft and spring hub. (See Figure 1).
- Reinstall ratchet wrench (Fig 2). Use long handled wrench to rotate arbor driver clockwise (for standard rotation). Number of 360° turns should match last digit in model number on serial plate. If model number includes an "R", reel is reverse rotation and wrench must be rotated counterclockwise. (See EXPLANATION on parts list page.)

CAUTION

Do not exceed number of turns indicated on serial plate. Over-tensioning can cause a broken spring, sheared shaft or other damage.

NOTE: On reels containing more than one spring, the hubs are connected at the factory. Therefore, by tightening the outer spring, the inside spring(s) will be tightened.

- Remove wrench and install on other spring stack. Add pretension turns as in step 6, above. Springs on both sides must be adjusted equally. Remove wrench, replace cover plates and return wrench to stored position.
- Remove collector cover and connect individual supply conductors to collector terminals. See ELECTRICAL CONNECTIONS diagram, on parts page.

MAINTENANCE

Periodically: A. Use compressed air to clean collector assembly and inside of collector housing. Inspect collector assembly for brush wear and pitted slip rings.

- B. Inspect cable for wear and check mounting bolts and other hardware for tightness.
- C. Check for broken springs by pulling about 2/3 cable off reel and observing "Broken Spring Indicators" on sides of spring canisters. See Fig. 3.

NOTE: Bearings and springs are prelubricated and require no periodic maintenance.

✓! WARNING

Do not attempt to remove spring from its housing. Clocktype springs can be dangerous to handle. Removal of spring from housing could result in personal injury.

SPRING REPLACEMENT

The unique SAFETYCHANGE® spring motor consists of a spring and hub sealed within a housing. A replacement spring is supplied sealed in its housing and the old unit should be discarded completely.

- 1. Turn off all electric power.
- 2. Disconnect cable from machine junction box.
- 3. Relieve all spring tension following steps under **SPRING DETENSIONING** on last page.
- 4. Remove inspection cover from face of spring housing.
- Rotate spool clockwise and observe spring shaft. Shaft should rotate clockwise and hub (with spring attached) should remain stationary.

NOTE: Do not attempt to remove spring if resistance is met or hub tends to rotate with shaft.

Continue to rotate spool and strike end of shaft several sharp blows with a lead hammer or rubber mallet until shaft rotates freely and hub remains stationary.

- 6. Remove (4) nuts which secure spring motor(s) to frame.
- 7. Slide spring motor(s) off shaft and discard.

NOTE: On multi-spring reels, be sure to remove and save dowel pins which connect one spring hub with another. Also remove snap rings on shaft between spring housings.

8. Install replacement spring motor(s), pawls and pawl springs.

NOTE: Pawl springs must be located between the pawls and the deepest section of the shaft grooves. Make sure that pawls and pawl springs are inserted flush with ends of shaft and hub or they may rub against inspection cover.

- Tighten nuts (and extension bolts) securing spring housing(s) to reel frame.
- 10. Connect free end of cable to junction box or adjust cord stop.
- Retighten nut on spring detensioner. See SPRING DETENSIONING, back page.
- 12. Tension spring with spanner wrench. Refer to **INSTALLATION** section
- 13. Replace inspection cover and top gear access cover.

ILLUSTRATED PARTS LIST

SM-28 GEAR DRIVE ELECTRIC CABLE REELS manufactured after April 16, 2001

• 600 VOLT AC. 250 VOLT DC. WATERTIGHT, DUST TIGHT.

- DO NOT EXCEED AMPERAGE RATING OF CABLE OR SLIP RING.
- NUMBER OF CIRCUITS MAY VARY FROM TWO (MINIMUM) TO 36 (MAXIMUM). FOUR CIRCUITS SHOWN.

NOTE:

Wire size, wire connectors, connection sequence, and connection methods must comply with National Electrical code and Local Electrical ordinances. If in doubt, contact a local electrical contractor or electrical inspector.

INSTALLATION

Use the following procedure to relieve spring tension prior to cable or spring replacement.

N WARNING

DO NOT insert hands into gearbox until springs are fully detensioned. Doing so could lead to serious injury.

- Cycle reel thru normal operating cycle and stop when maximum amount of cable is wound onto reel spool.
- 2. Set spool lock to prevent spool from turning.
- 3. Remove access cover from top of gearbox.
- 4. Using open end wrench, loosen large hex nut slowly to allow springs to unwind. Fully loosen nut further with wrench until springs are completely unwound.
- Repair reel or replace springs or cable as necessary.
- Retighten nut until definite resistance is felt and spring washers are full compressed (flat). Replace cover.

NOTE: If hex nut is not adequately tightened, spring unwinding can occur during reel operation.

7. Pretension reel. See **INSTALLATION** section, front page.

CABLE REMOVAL

Use the following procedure to remove worn or damaged cable from reel prior to installation of new cable.

! CAUTION

Failure to relieve all spring tension prior to removing cable could result in damage to equipment or personal injury. Follow instructions carefully.

- Move machine serviced by reel to a position closest to reel. Springs will still be under pre-tension at this point.
- 2. Turn off all electric power.
- 3. Using spool lock. lock spool to prevent turning.
- 4. Disconnect cable from machine junction box.
- 5. Detension springs as described above.
- Remove cable from spool. Loosen cable clamp and water-tight connector and disconnect conductors from slip ring.

CABLE INSTALLATION

Use the following procedure to replace cable or if reel was ordered without cable. Refer to CABLE INSTALLATION REFERENCE DRAWING, below.

 Unspool new cable from shipping spool and lay out to eliminate twist.

NOTE: This step is not essential, but will aid in winding operation of the reel and prolong cable life.

Feed one end of the cable through water-tight connector on the main shaft inside the spool and into the slip ring side (See drawing below).

NOTE: This may require that jacket of cable be stripped to allow conductors to pass through shaft.

- Connect individual conductors to appropriate rings on collector using crimp fitting or similar connection method.
- 4. Tighten water-tight connector and cable clamp in slot on spool disk. **Do not over-tighten.**
- 5. Wind the cable onto the reel spool by hand rotating spool in direction it turns free of spring tension.
- Connect free end of cable to machine junction box.
- Pretension reel and complete reel installation as previously described.

COLLECTOR REPLACEMENT

- 1. Turn off all power to reel.
- 2. Remove collector cover and gasket.
- 3. Disconnect electric leads to and from collector.
- 4. Remove drive stud bolt from bearing housing.
- 5. Remove button plug from hole in side of housing. Insert long 1/8" Allen wrench through hole and loosen two set screws in collector locking collar. Set screws are at 90° to one another.

NOTE: Older reels may have lock screws which must be removed to reach set screws holding collector to shaft.

- 6. Slide collector off shaft.
- 7. Install new collector by reversing
